Management S.r.l.

VISION STATEMENT:

Turning waste into a resource

REPLASTCA HDPE starts from the belief that preventing, reducing and recycling waste is at the heart of sustainable waste management. Sustainable waste management means using resources more efficiently, saving money, time, preventing pollution and future environmental impact costs.

MISSION

STATEMENT:

Developing sites and facilities in accordance to local and international legislation, in order to ensure sustainable waste management.

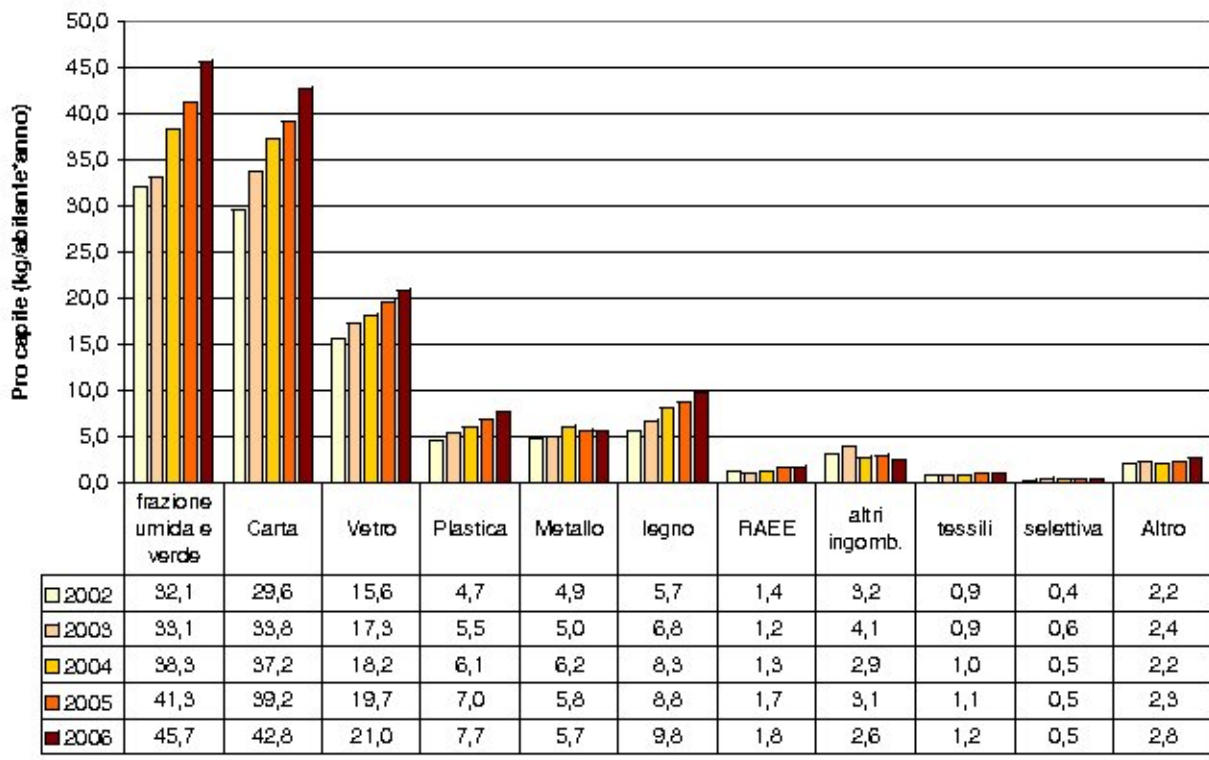

ACTIVITY:

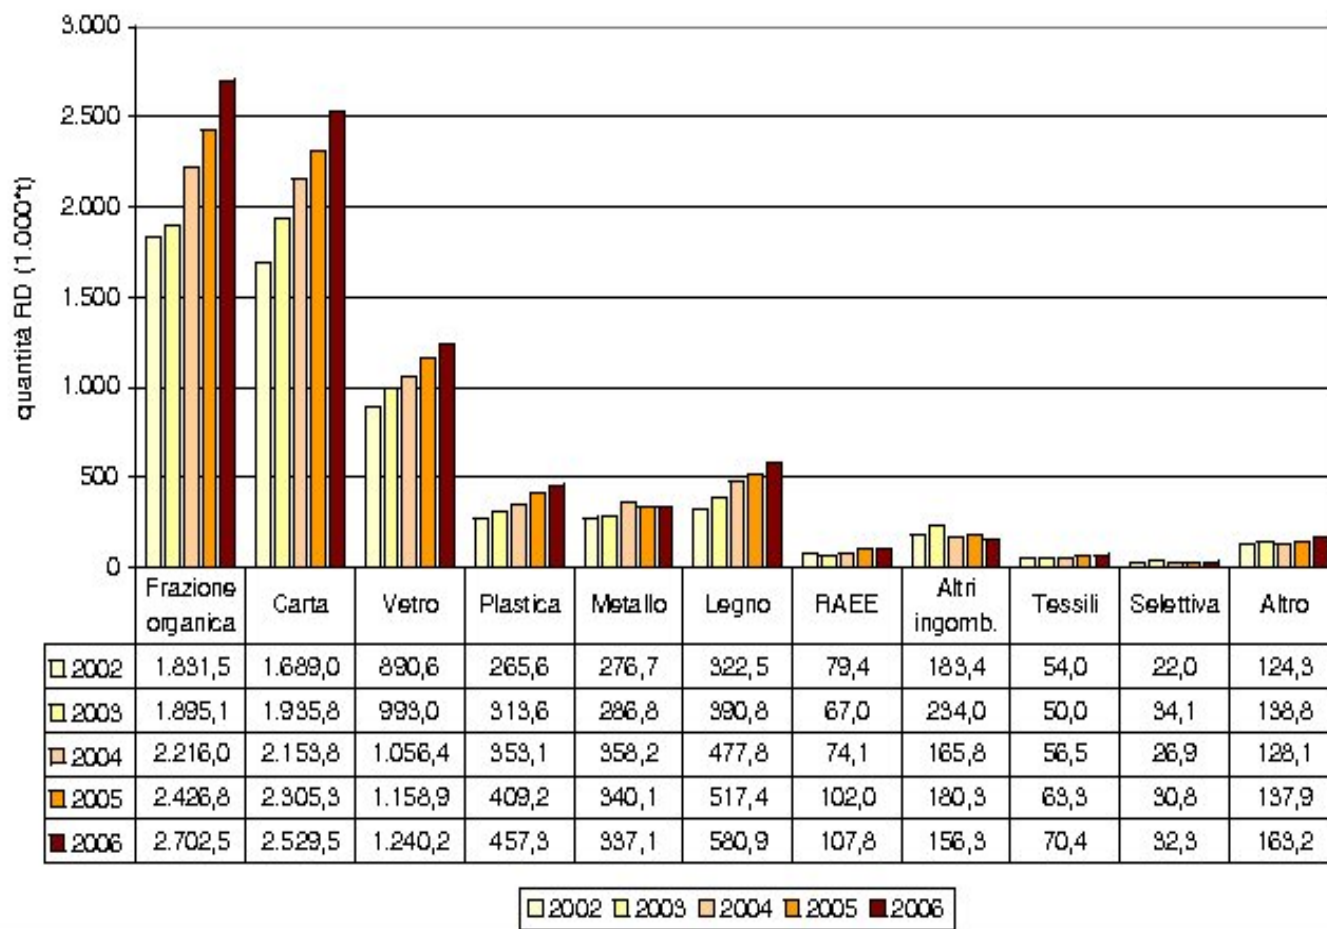

REPLASTICA HDPE is interested in recycling activities:

• **Purchase of waste bottles** – selected or to be selected – Our shareholder TeMa needs 10.000tons per years of HDPE. We are looking for:

- **Partnership in realising a plant for waste separation and selection:** . . . Recyclables are commodities like any raw materials. If there is demand for recycled materials in manufacturing, their value will go up and the prices paid to recyclers will be higher. Consumers can help keep that demand high by searching for and buying products made from recycled materials. In doing so, we help support the recycled materials market and guarantee the success of recycling programs.

- **To sell materials for environmental restoration needs:** TEMA provides several comprehensive solutions which are versatile and respond to a variety of erosion management and environmental restoration needs.

UP TO DAY

REPLASTICA HDPE has realised a “collecting and separating plant” in Adjud/Vrancea.

REPLASTICA HDPE is setting up a new plant for transforming HDPE bottle into re-granulated HDPE.

Best Regards

Ilario Fantuzzi
